Deep Learning

Generative AI

1956

Artificial Intelligence

the field of computer science that seeks to create intelligent machines that can replicate or exceed human intelligence

1997

Machine Learning

subset of AI that enables machines to learn from existing data and improve upon that data to make decisions or predictions

2017

Deep Learning

a machine learning technique in which layers of neural networks are used to process data and make decisions

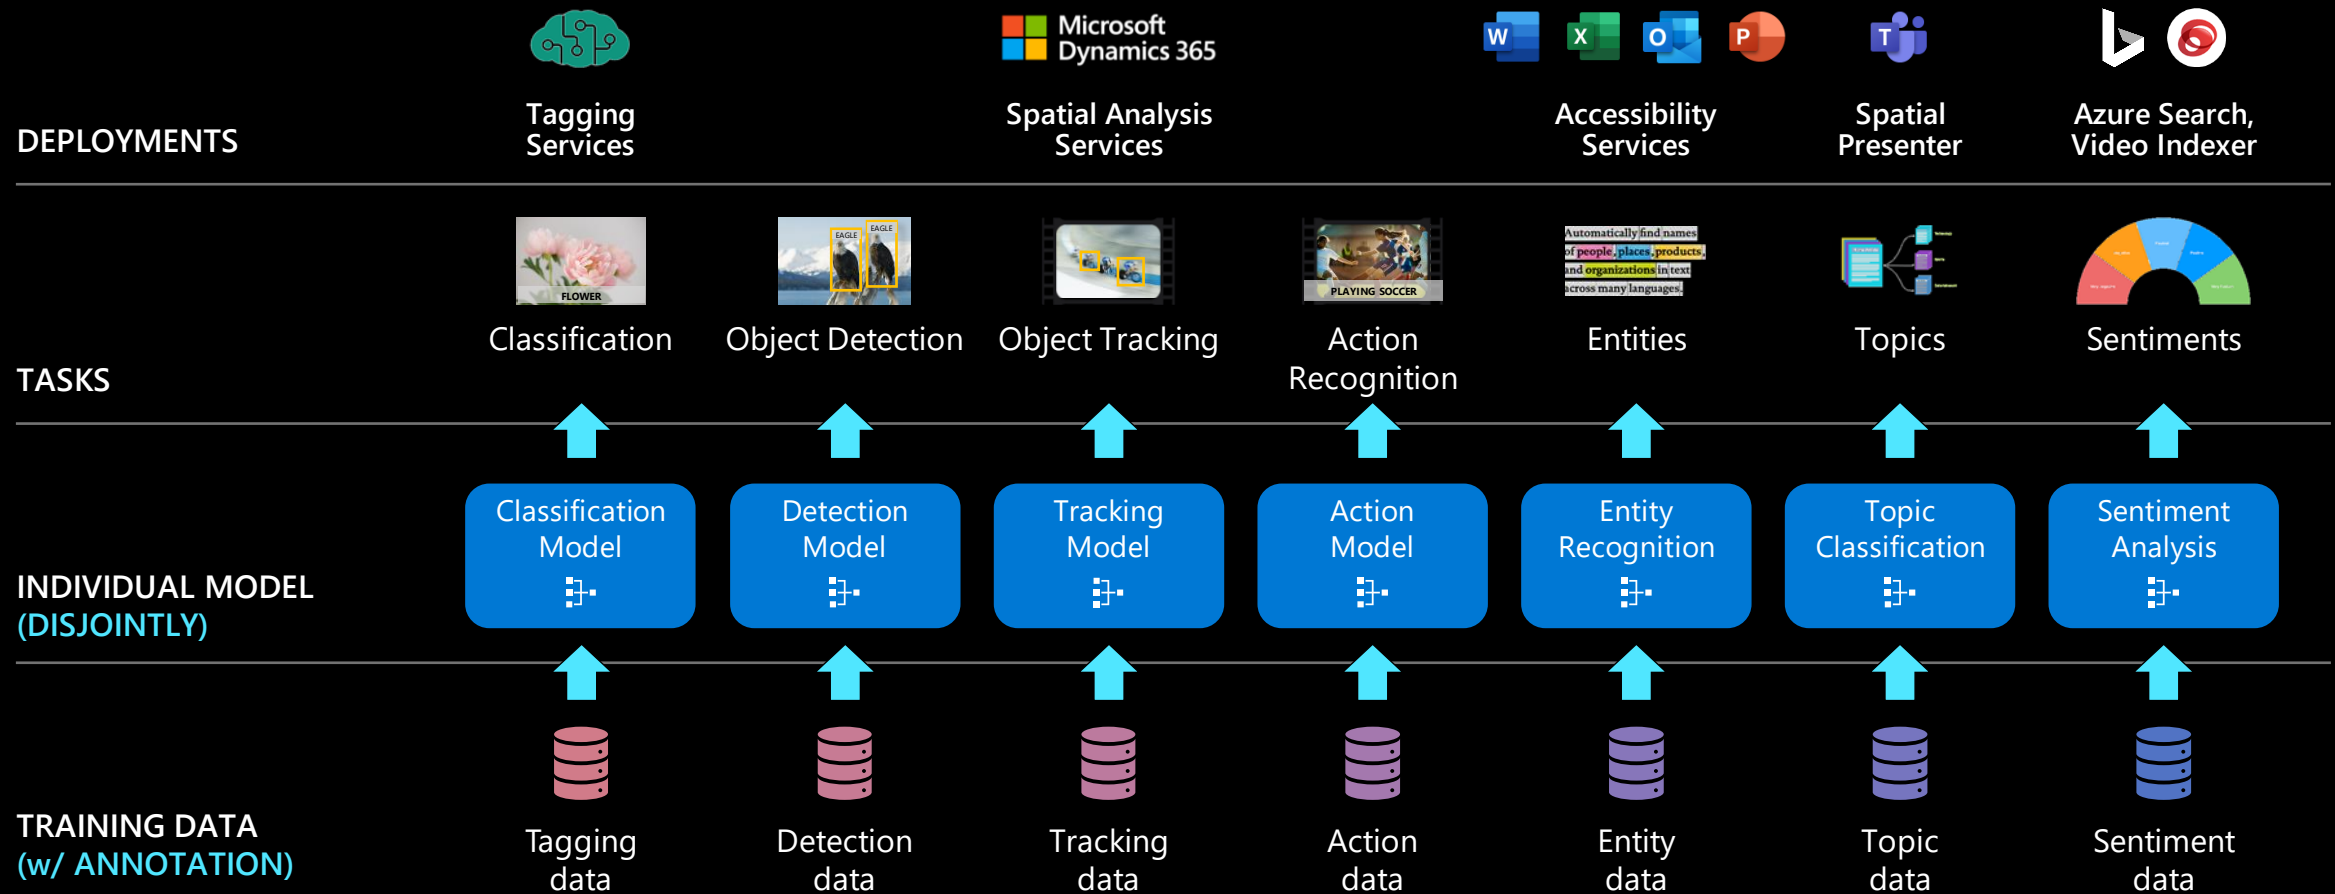

2021

Generative AI

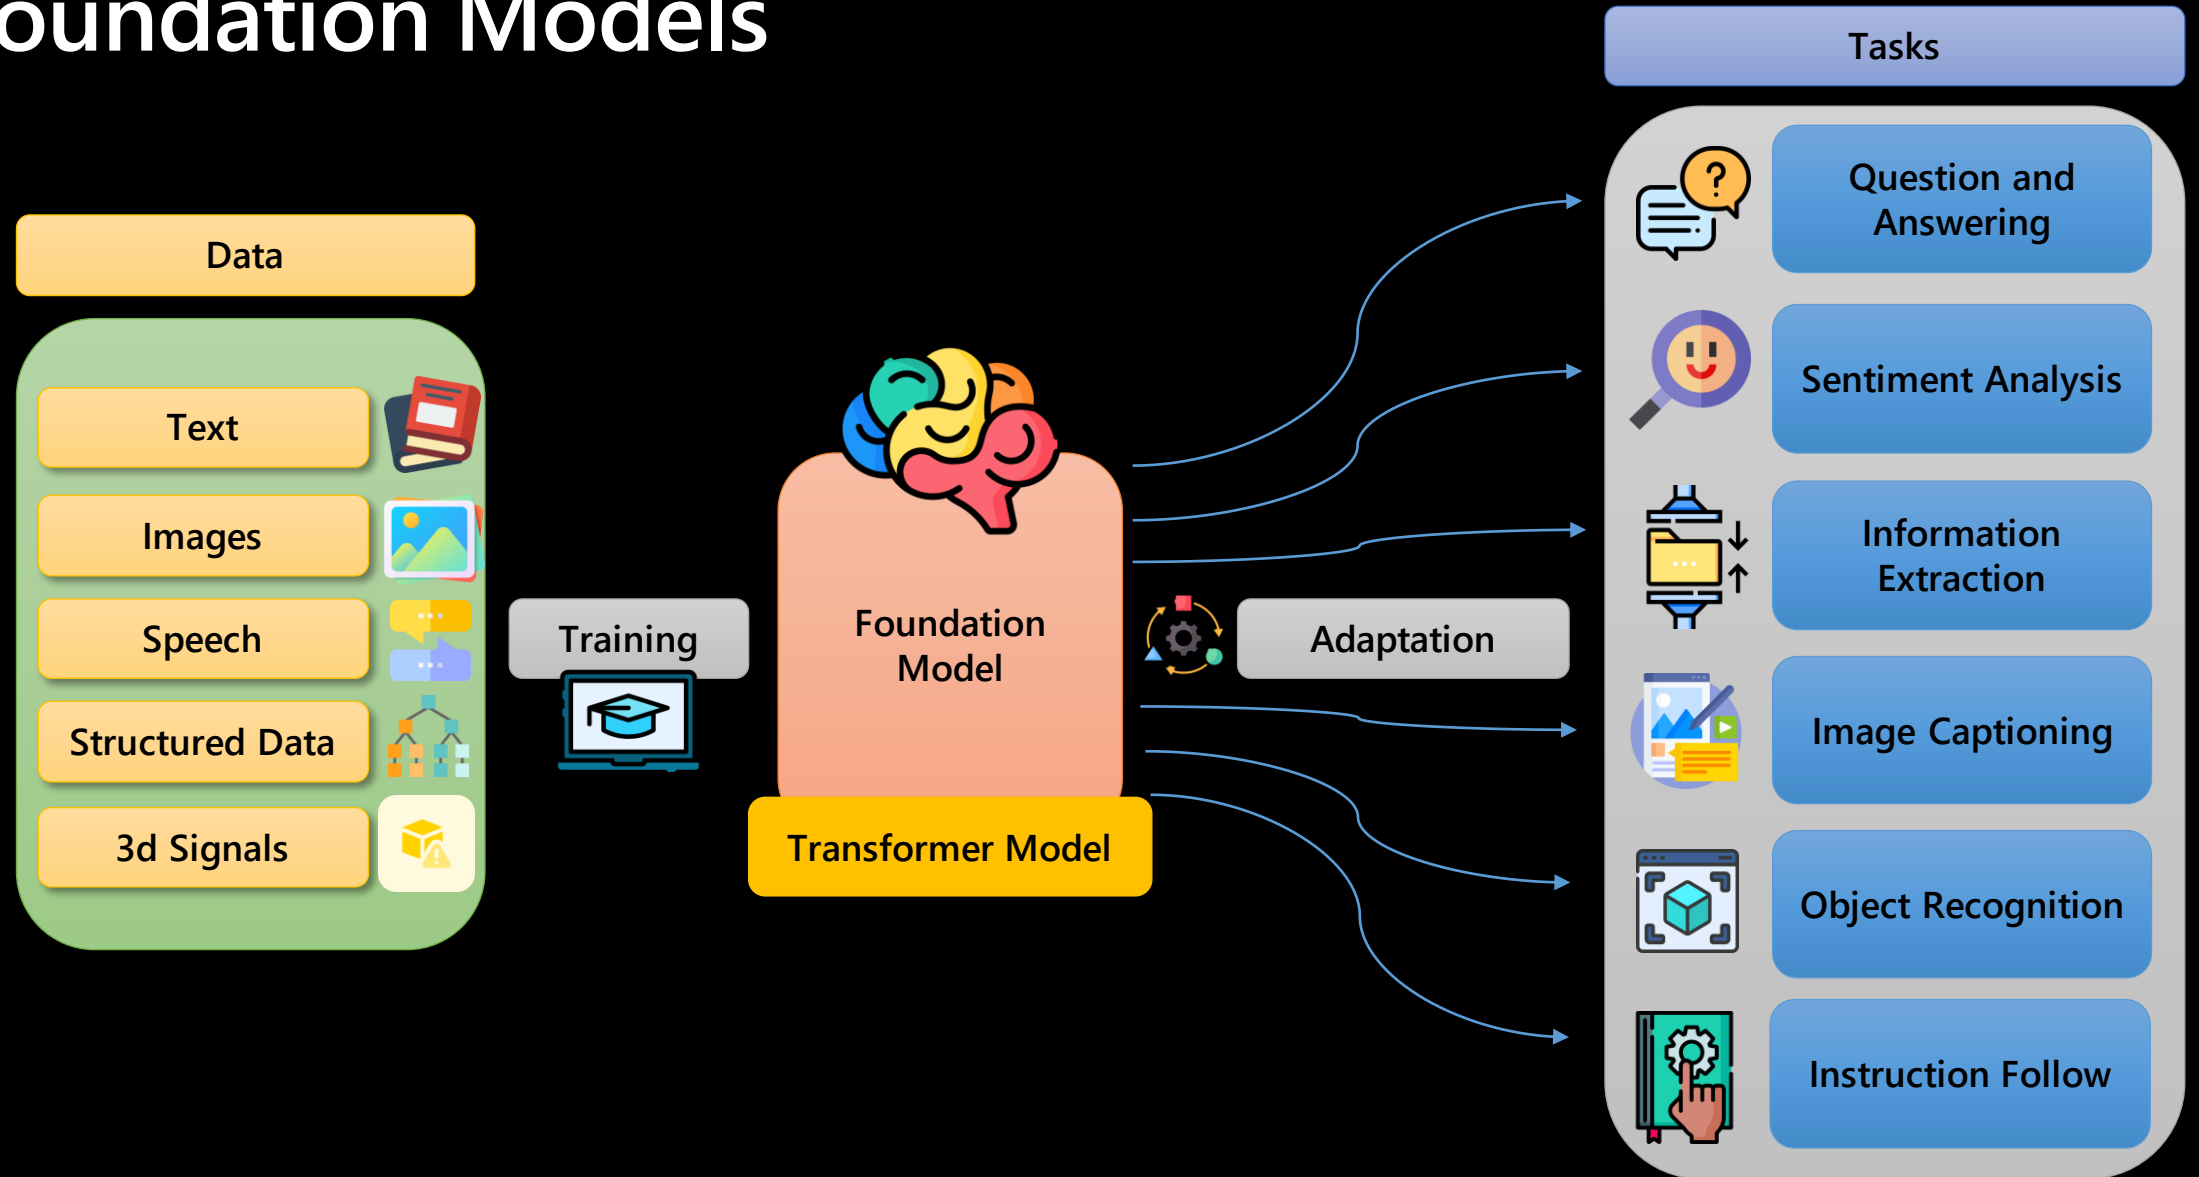

Create new written, visual, and auditory content given prompts or existing data.

Traditional model development

High cost and slow deployment—each service is trained disjointly

Stay focused on your business outcomes and unlock insights in your data with Copilot

Create insightful
reports

Uncover actionable
insights

Translate insights
into impact

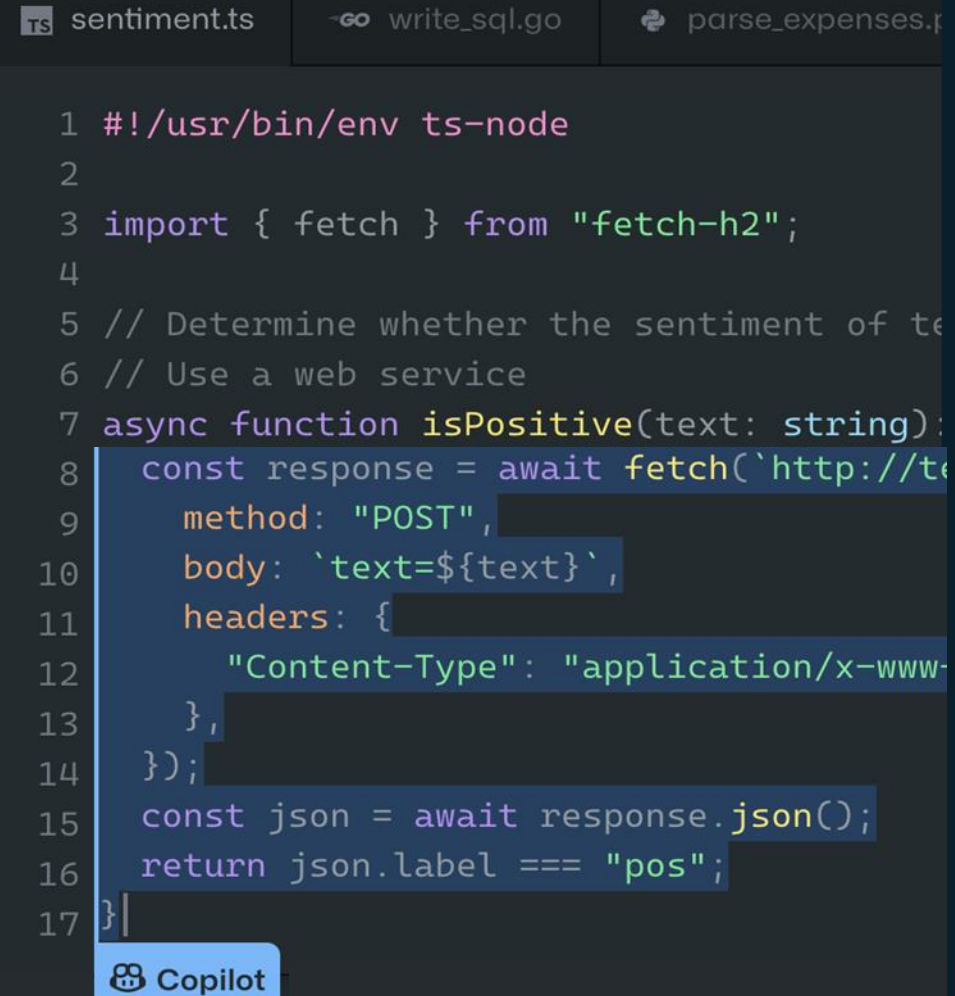

46% | of new code is now written by AI

55% | faster overall developer productivity

75% | developers feel more focused on satisfying work

A screenshot of a code editor interface. At the top, there are three tabs: "sentiment.ts" (selected), "write_sql.go", and "parse_expenses.p". The "sentiment.ts" tab shows a TypeScript file. The code is as follows:

```
1 #!/usr/bin/env ts-node
2
3 import { fetch } from "fetch-h2";
4
5 // Determine whether the sentiment of text is positive or negative
6 // Use a web service
7 async function isPositive(text: string): boolean {
8   const response = await fetch(`http://localhost:3000/sentiment`, {
9     method: "POST",
10    body: `text=${text}`,
11    headers: {
12      "Content-Type": "application/x-www-form-urlencoded",
13    },
14  });
15  const json = await response.json();
16  return json.label === "pos";
17 }
```

At the bottom of the editor, there is a blue button with the GitHub Copilot logo and the text "Copilot".
